Abstracts

A seal puller is a specialized tool for removing oil seals from the shafts and housings of mechanical products. The seal puller makes it easy to remove an oil seal from a machine or automobile without damaging the shaft or housing. Seal pullers are primarily used to remove oil seals, gaskets, and bearing shields. Oil seals are used on various machine parts that are lubricated with lubricating oil or grease. Gaskets are also used to seal joints between machine parts. Bearing shields are installed to prevent dust and other debris from entering the bearings and are used in many rotating machines and other equipment. Therefore, seal pullers are used in many situations, such as in factories and sites where maintenance and repairs are performed.

The global Seal Puller market size was estimated at USD 851.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
