Abstracts

Sealed hot water cylinders are pressurized storage vessels designed to provide domestic hot water in closed heating systems, typically integrated with boilers, solar thermal systems, or heat pumps to maintain consistent water pressure and temperature. Constructed from materials like copper, stainless steel, or glass-lined steel, they are engineered to withstand high internal pressures and prevent air ingress, ensuring efficiency and longevity in both residential and light commercial applications. These systems are distinct from vented cylinders, as they operate under mains pressure, delivering stronger flow rates to multiple outlets simultaneously without the need for additional pumps or cold water storage tanks.

The global Sealed Hot Water Cylinders market size was estimated at USD 1800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
