Abstracts

A seamless steel high-pressure gas cylinder is a type of pressure vessel made from high-strength steel, specifically designed to safely store and transport gases at high pressures. Unlike welded cylinders, these cylinders are manufactured without seams, using processes such as extrusion or rotary forging, which creates a continuous, uniform structure. This design improves the cylinder's strength, resistance to pressure, and ability to withstand harsh environments. Seamless steel cylinders are commonly used in a wide range of applications, including the storage of industrial gases (such as oxygen, nitrogen, and argon), medical gas supply, and compressed gases for various industries like welding, diving, and energy. Their seamless construction ensures higher safety standards, durability, and longevity compared to other types of gas cylinders.

The global Seamless Steel High Pressure Gas Cylinder market size was estimated at USD 1815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
