Abstracts

Seated cable row machines are a type of strength training equipment designed to primarily target the muscles of the back, including the latissimus dorsi, rhomboids, trapezius, and rear deltoids, while also engaging the biceps and core stabilizers. These machines typically consist of a weighted cable pulley system attached to a seat and footplate, allowing the user to pull a handle or bar toward their torso while maintaining a seated position with knees slightly bent and chest braced; this design promotes controlled, isolated movement patterns that emphasize proper form and reduce strain on the lower back compared to free-weight alternatives like bent-over rows. They are commonly found in commercial gyms, rehabilitation centers, and home fitness setups due to their versatility, adjustability in resistance and grip attachments, and effectiveness in building upper-body strength, improving posture, and supporting balanced muscular development.

The global Seated Cable Row Machines market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
