Report Overview

Second Focal Plane (SFP) Rifle Scopes are optical sighting devices used in firearms, particularly rifles, for aiming at targets. Unlike first focal plane scopes, the reticle in SFP scopes remains the same size regardless of magnification, while the target image changes. This means that the subtensions of the reticle remain accurate at only one specific magnification setting, typically the highest power. SFP scopes are known for their simplicity and affordability, making them popular among hunters and target shooters who primarily engage in shorter to mid-range shooting scenarios.
