Abstracts

Batteries are the most expensive component of an electric car. At the end of their service life in electric vehicles, the retired batteries could still retain 70-80% of their initial capacity. Recycling is necessary in the end but before that, giving those retired but still capable batteries a "second-life" in less-demanding applications. After remanufacturing, such batteries are still able to perform sufficiently to serve less-demanding applications, such as stationary energy-storage services. Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.

The global Second Life Electric Vehicle Battery market size was estimated at USD 2650.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 36.40% during the forecast period.
