Report Overview

Batteries are the most expensive component of an electric car. At the end of their service life in electric vehicles, the retired batteries could still retain 70-80% of their initial capacity. Recycling is necessary in the end but before that, giving those retired but still capable batteries a 'second-life' in less-demanding applications. After remanufacturing, such batteries are still able to perform sufficiently to serve less-demanding applications, such as stationary energy-storage services.

The global Second Life Electric Vehicle Battery market size was estimated at USD 1533 million in 2023 and is projected to reach USD 25053.68 million by 2032, exhibiting a CAGR of 36.40% during the forecast period.

North America Second Life Electric Vehicle Battery market size was estimated at USD 687.60 million in 2023, at a CAGR of 31.20% during the forecast period of 2024 through 2032.
