Abstracts

Second Life EV Battery refers to the repurposing of electric vehicle (EV) batteries that have reached the end of their useful life for automotive applications?typically when their capacity drops below 70?80%?but still retain sufficient performance for less demanding, stationary energy storage applications such as residential, commercial, or grid-scale storage systems, backup power, or integration with renewable energy sources like solar and wind. These batteries are evaluated, reconditioned, tested for safety and performance, and integrated into new configurations to extend their operational lifespan, reduce waste, lower the carbon footprint associated with battery production, and provide a more cost-effective energy storage solution compared to new batteries.
