### Report Overview

Secondary water supply services refer to the provision of alternative water sources and distribution systems, typically separate from the primary municipal water supply network. These services aim to augment or supplement the main water supply, especially in areas facing water scarcity, emergencies, or periods of high demand. Secondary water supply often involves sourcing water from alternative sources such as rainwater harvesting, underground reservoirs, or treated wastewater. The water is then treated and distributed through a separate system, ensuring a reliable supply for non-potable uses like irrigation, industrial processes, or firefighting.
