Abstracts

The Security Monitoring Cloud Platform is a cloud computing service that deploys agents within the cloud environment to continuously collect system logs, performance metrics, and security event data, centrally analyzing and managing it to detect potential security threats. The platform utilizes a visual dashboard to provide real-time monitoring and global visibility of cloud resources. Upon detecting abnormal behavior or security vulnerabilities, it instantly alerts the security team, helping them quickly identify the source of the risk, trace the attack path, and promptly remediate security vulnerabilities in systems, applications, and software, thereby achieving dynamic protection and proactive response for the cloud environment. The upstream industries of the security monitoring cloud platform include network security hardware (such as firewalls, log collectors), terminal agent software, cloud infrastructure services (IaaS, such as Alibaba Cloud, AWS), data collection and transmission modules, identity authentication technology and big data analysis engine suppliers, whose technical capabilities directly affect the platform's data acquisition, processing efficiency and detection accuracy; the midstream is the security monitoring cloud platform developers and integrators, who are responsible for building threat detection models based on AI and machine learning, developing visual dashboards, and implementing multi-source log correlation analysis (SIEM), automated alert response (SOAR) and compliance management functions, and providing SaaS or privately deployed security operations center (SOC) solutions; the downstream is widely used in industries with high network security requirements such as finance, telecommunications, energy, government, medical care and Internet companies, and is used for security situation awareness and vulnerability management in cloud environments, data centers, enterprise IT systems and hybrid architectures. With the implementation of the Cybersecurity Law and the acceleration of digital transformation, the industry chain is developing towards the deep integration of intelligent threat hunting, cross-platform collaborative defense and zero-trust

architecture. The gross profit margin of the security monitoring cloud platform is 65%.

The global Security Monitoring Cloud Platform market size was estimated at USD 869.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
