Abstracts

Security taggants are unique markers that are added to products or materials to help identify and track them. These taggants are invisible to the naked eye and can only be detected using specialized equipment. They are often used in the manufacturing of high-value items such as currency, pharmaceuticals, and electronics to deter counterfeiting and theft. Security taggants provide an added layer of security and traceability, allowing authorities to verify the authenticity of products and track their movements throughout the supply chain. The global invisible taggants market is expected to grow significantly in the coming years. The rising rates of shoplifting and organized retail crime have prompted retailers to use security taggants to prevent theft and protect inventory. The continuous development of security tag technologies such as RFID and EAS, with enhanced functionality, accuracy, and ease of integration with other retail systems, has promoted market growth. As retail chains expand globally, there is a growing need for standardized and scalable security solutions, driving the demand for security taggants.

The global Security Taggants market size was estimated at USD 745.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
