Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Seed-producing Pumpkins competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Seed-producing pumpkins are varieties specifically cultivated for obtaining pumpkin seeds, differing from edible pumpkins that are primarily grown for their flesh. These pumpkins typically have thinner flesh and fully developed seeds, with seed kernels that are high in oil content and have thin, easily removable shells, making them suitable for oil extraction or pumpkin seed food processing. In cultivation, seed-producing pumpkins are often high-yield, disease-resistant hybrid varieties with plump seeds, and they are widely used in the food, health supplement, and vegetable oil industries. In 2024, the global production of seed-producing pumpkins reached 538 kilotons, with an average global market price of around US\$ 1,028 per ton. Seed-producing pumpkins are typically supplied by pumpkin growing companies, most of which primarily sell pumpkin seeds, with a few selling whole pumpkins. Some companies have a complete supply chain, processing pumpkin seeds into downstream products such as pumpkin seed oil or selling them to downstream processors.

The global Seed-producing Pumpkins market size was estimated at USD 553.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
