Abstracts

The segmented multistage centrifugal pump is a liquid conveying device that provides high head and large flow rate by connecting multiple levels of centrifugal impellers in series. It consists of multiple pump sections (i.e. multiple centrifugal impellers and their corresponding pump casings). Each pump section generates a certain pressure, and multiple pump sections combined can achieve higher head and flow rate. The advantage of this type of pump is that it can meet the needs of high pressure, high flow rate and stable operation.

The global Segmented Multistage Centrifugal Pump market size was estimated at USD 3445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
