Report Overview

A segmented tire mold having two sidewalls, a plurality of radially movable segments and a pair of internally conical casing rings cooperable with the segments to close the mold as the rings are urged coaxially together in a pot heater. A fixture cooperates with the mold to facilitate assembling or disassembling the mold. In the fixture, the casing rings can be moved axially away from the respective sidewalls and from each other, freeing the segments to be moved outwardly by individual screw jacks operated by a common motor.
