Report Overview

This report studies the seismic isolation system market. Seismic isolation system is the system used to reduce the effects of earthquake ground shaking on structure, their components and protect them from damaging. The system decouples the building or structure from the horizontal components of the ground motion by interposing structural elements with low horizontal stiffness between the structure and the foundation. This gives the structure a fundamental frequency that is much lower than both its fixed-base frequency and the predominant frequencies of the ground motion.

The global Seismic Isolation System market size was estimated at USD 447 million in 2023 and is projected to reach USD 576.45 million by 2030, exhibiting a CAGR of 3.70% during the forecast period.

North America Seismic Isolation System market size was USD 116.48 million in 2023, at a CAGR of 3.17% during the forecast period of 2024 through 2030.
