## Abstracts

Seismic V-Loops joint is a special device designed to protect pipeline systems from damage when natural disasters such as earthquakes occur. The device adopts a V-ring structure with good flexibility and elasticity. When the pipeline is deformed or displaced due to an earthquake, it can absorb and disperse stress through its own deformation, thereby protecting the pipeline system from damage. Seismic V-Loops Joint is widely used in pipeline systems in the petroleum, chemical, electric power and other industries, and is of great significance to improving the seismic resistance and safety of pipeline systems.

The global Seismic V-Loops Joint market size was estimated at USD 877.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
