## Abstracts

Selective Laser Sintering (SLS) 3D printing service is a powder-based additive manufacturing technology that uses a laser to selectively sinter powdered materials, fusing them together to form a solid object layer by layer. SLS technology is widely adopted in industries requiring high-performance parts with complex designs, such as aerospace (e.g., lightweight aircraft components) and medical devices (e.g., patient-specific implants). Its ability to balance design flexibility with mechanical strength has driven its growth in both prototyping and low-volume manufacturing, competing with technologies like FDM and Stereolithography (SLA).

The global Selective Laser Sintering (SLS) 3D Printing Service market size was estimated at USD 4081.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.90% during the forecast period.
