Abstracts

Selective plating, also known as brush plating or spot plating, is an electroplating technique where a localized area of a component is plated without immersing the entire part in a traditional plating bath; instead, a handheld anode wrapped in an absorbent material is saturated with electrolyte and brushed over the target surface while an electrical current deposits the desired metal coating?such as gold, silver, nickel, or tin?onto specific zones to enhance properties like wear resistance, corrosion protection, conductivity, or dimensional restoration.
