Abstracts

Self-adhesive heat shields are specialized materials designed to reflect, absorb, or dissipate thermal energy, featuring an integrated pressure-sensitive adhesive layer for convenient and tool-free application onto surfaces requiring thermal protection. These products are engineered to withstand high temperatures, reduce radiant heat transfer, and protect adjacent components or structures from thermal degradation, making them essential in industries where heat management is critical but space constraints or complex geometries limit the use of mechanically fastened alternatives. Composed of multilayered constructions such as reflective foils, insulating foams, or ceramic-based composites, they offer versatility in performance tailored to specific thermal, environmental, and durability requirements.

The global Self Adhesive Heat Shield market size was estimated at USD 187.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
