Abstracts

Self-adhesive materials, also known as pressure-sensitive adhesives (PSAs), are a class of functional materials that form a bond with a surface upon the application of light pressure, without requiring water, solvent, or heat activation; these materials typically consist of a backing or carrier (such as paper, film, foil, or fabric) coated on one or both sides with an adhesive layer that is permanently tacky at room temperature and protected by a release liner until application. They are engineered to provide instant adhesion upon contact, with properties such as tack, peel adhesion, and shear resistance tailored to specific end-use requirements across industries including packaging, labeling, graphics, medical, automotive, and construction, where they enable efficient application, durability, and versatility in both permanent and removable formats.

The global Self Adhesive Material market size was estimated at USD 8500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
