Abstracts

Self-bonding magnet wires are a specialized type of insulated copper or aluminum wire used primarily in electrical applications, where they are designed to adhere to themselves or other components upon the application of heat, pressure, or solvents, eliminating the need for additional adhesives or binding materials; this self-bonding property is achieved through a thermoplastic or thermosetting coating, such as polyurethane, polyester, or polyamide-imide, which allows the wire to form strong, durable bonds that enhance mechanical stability, vibration resistance, and thermal performance in products like electric motors, transformers, inductors, solenoids, and various types of coils.

The global Self Bonding Magnet Wires market size was estimated at USD 2150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
