Report Overview

Self-centering Power Chuck is a device used to clamp rotating workpieces in machining. This chuck can clamp and fix workpieces of various shapes and allow them to be rotated on machine tools, such as turning, milling, drilling, etc. Self-centering power chucks have a self-centering feature, which means that when a workpiece is clamped, the chuck automatically adjusts the clamping force to ensure that the workpiece remains centrally symmetrical as it rotates. This ensures that the rotation axis of the workpiece during processing is consistent with the spindle center of the machine tool, providing higher processing accuracy.
