Abstracts

Self-cleaning concrete is a special type of concrete that has a self-cleaning function by adding specific additives (such as photocatalytic materials such as titanium dioxide) to ordinary concrete. These additives can decompose pollutants on the concrete surface under light conditions, thereby achieving a cleaning effect. With the improvement of environmental awareness and the continuous innovation of building materials technology, the market demand for self-cleaning concrete will continue to grow. At present, self-cleaning concrete has been used in high-end buildings, transportation infrastructure and environmental protection facilities. With the continuous maturity of technology and the reduction of costs, the market size of self-cleaning concrete is expected to expand further in the future. At the same time, the government's supportive policies for environmentally friendly building materials will also promote the rapid development of the self-cleaning concrete market.

The global Self-Cleaning Concrete market size was estimated at USD 6521.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
