## Abstracts

A self-cleaning magnetic separator is an advanced material separation device designed to automatically remove ferrous contaminants from bulk materials in industrial processes. Utilizing a powerful magnetic field, it efficiently captures and separates metal particles from products like grains, minerals, plastics, or chemicals as they pass through a conveyor or chute. The self-cleaning feature includes an automated mechanism, such as a rotating drum or a moving belt, that continuously removes captured contaminants from the magnetic field without interrupting the operation. This ensures consistent performance, reduces maintenance needs, and minimizes downtime. Widely used in industries like mining, food processing, recycling, and manufacturing, self-cleaning magnetic separators enhance product purity, protect downstream equipment, and improve operational efficiency.

The global Self-Cleaning Magnetic Separator market size was estimated at USD 587.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
