Abstracts

Self-cleaning sweeping robots are autonomous floor-cleaning devices equipped with docking stations that automatically empty collected debris from the robot's dustbin into a sealed, larger-capacity bin, reducing the need for frequent manual intervention and enabling continuous, maintenance-light operation over extended periods. These robots typically incorporate advanced navigation systems such as LiDAR, camera-based mapping, or simultaneous localization and mapping (SLAM) technology to efficiently and systematically clean spaces while avoiding obstacles, and they often integrate with smart home ecosystems for remote control and scheduling via mobile applications or voice assistants. The self-emptying feature, which may involve suction or compression mechanisms to transfer waste, represents a significant evolution in convenience compared to standard robotic vacuums, targeting consumers seeking higher levels of automation in household chores.

The global Self Cleaning Sweeping Robot market size was estimated at USD 12235.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
