Abstracts

Self-destructing syringes, also known as auto-disable (AD) syringes, are single-use medical devices designed to prevent reuse by automatically disabling or locking after a single injection, thereby reducing the risk of needle-stick injuries and the transmission of bloodborne pathogens such as HIV and hepatitis; these syringes typically feature mechanisms such as a metal clip that blocks the plunger, a weakened barrel that cracks upon use, or a retractable needle that render them inoperable after initial use, aligning with global health initiatives aimed at improving injection safety, particularly in immunization programs and resource-limited settings where improper syringe disposal and reuse pose significant public health challenges.

The global Self Destructing Syringe market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
