Abstracts

Self-extinguishing plastics, also known as flame-retardant or fire-resistant plastics, are polymer materials engineered to inhibit or resist combustion when exposed to ignition sources, thereby preventing or delaying the spread of flames; these materials achieve their fire-resistant properties through the incorporation of chemical additives (such as halogenated, phosphorus-based, or mineral compounds) or through intrinsic molecular structures that form protective char layers, reduce heat release, and suppress smoke generation, making them critical for applications where fire safety is paramount, including electronics, construction, automotive components, aerospace, and consumer goods.

The global Self Extinguishing Plastics market size was estimated at USD 7850.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
