Abstracts

Self-illuminated display panels are a display technology that does not require a backlight and is able to display images or text by emitting its own light. Unlike traditional liquid crystal display (LCD) panels, which require a backlight to illuminate the screen, self-luminous panels emit light directly through self-luminous materials (such as organic light-emitting diodes OLEDs or quantum dots) to display images.

The global Self-illuminated Display Panel market size was estimated at USD 162.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
