Abstracts

Self-inflating resuscitators are manual ventilation devices used in emergency medical situations to provide positive pressure ventilation to patients who are not breathing or are breathing inadequately; these devices consist of a flexible bag, a non-rebreathing valve, an oxygen reservoir, and a face mask, and they function independently of an external gas source by utilizing ambient air that can be enriched with supplemental oxygen, making them particularly valuable in pre-hospital settings, during transport, or in resource-limited environments where compressed gas may not be readily available.

The global Self Inflating Resuscitator market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
