Abstracts

Self leveling floor screed is a cementitious or gypsum-based compound mixed with water to create a free-flowing slurry that, when poured, automatically spreads and levels itself across a subfloor surface to produce a smooth, flat, and durable finish with minimal manual intervention, primarily used as an underlayment for various floor coverings such as tiles, vinyl, wood, or carpet, or as a finished floor in industrial or commercial settings. Its key properties include high flowability, rapid drying times, self-smoothing capabilities, and compatibility with underfloor heating systems, making it a preferred solution for correcting uneven substrates, filling depressions, and ensuring a perfectly level surface prior to the installation of final flooring materials.

The global Self Leveling Floor Screed market size was estimated at USD 4850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
