## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Self-locking Lifting Hook competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of self-locking lifting hooks reached 9.3 million units, with an average selling price of US\$58 per unit. Self-locking lifting hooks are load-bearing connection components with automatic locking mechanisms, used to prevent accidental detachment of lifting equipment during lifting operations. They are widely used in port loading and unloading, metallurgical plants, construction engineering, and machinery manufacturing. The industry's average gross profit margin is approximately 18-25%. The main upstream raw materials are high-strength alloy steel forgings, locking springs, and pins, accounting for approximately 65-72% of the cost, with steel consumption per unit of product being approximately 2.8-5.6 kg. Downstream suppliers are manufacturers of bridge cranes, gantry cranes, and specialized lifting tools; a single lifting unit typically consumes 1-4 hooks. With rising safety requirements and increased frequency of large-scale hoisting projects, the demand for self-locking hooks with anti-mis-unlocking structures, high fatigue strength, and visual safety status displays has grown significantly. Future development directions include the application of high-strength lightweight materials, integration of intelligent monitoring and sensing modules, and special corrosion-resistant designs for port and new energy construction. Suppliers with process consistency and reliability verification capabilities will gain more incremental orders and premium pricing.

The global Self-locking Lifting Hook market size was estimated at USD 539.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
