Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Self-Locking Main Hook competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The self-locking main hook is a main hook used for equipment such as cranes and hoists. It has an automatic locking function, which can ensure that the hoisted objects are firmly hung during the hoisting process to prevent the objects from falling off. Its design allows the hook mouth to automatically close when it is stressed, and achieves self-locking through the mechanical structure. When the load object is hoisted, the hook mouth will not open easily. The self-locking main hook improves the safety of hoisting operations and is widely used in ports, construction sites, ships, mines and other places. It is particularly suitable for heavy loads or high-altitude working environments, reducing the safety risks of operators.

The global Self-Locking Main Hook market size was estimated at USD 1177.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
