Abstracts

Self-lubricating bearings, as the name suggests, provide their own lubrication during operation without requiring application of grease or oil lubricants. As the bearing operates, the lubricant is released through pores in the sliding layer, lubricating the bearing surface. The lubricant is uniformly dispersed throughout the sliding layer and thus there is no reduction in low friction bearing performance, even if the sliding layer becomes worn. A "running-in" surface is also usually included at the top of the sliding layer to provide low friction bearing performance at start up before the impregnated lubricant reaches the bearing surface. Global key players of Self-lubricated Bearing include Daido Metal, Oiles Corporation, Tenneco (Federal-Mogul), GGB, RBC Bearings, etc. The top five players hold a share over 30%. Asia-Pacific is the largest market, has a share about 50%, followed by Europe, and North America, with share 24% and 21%, separately. In terms of product type, Metallic Self-lubricated Bearing is the largest segment, occupied for a share of 62%, and in terms of application, Automotive has a share about 34%.

The global Self-lubricated Bearing market size was estimated at USD 4682.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
