Report Overview

The self-priming sewage pump integrates self-priming and non-clogging sewage discharge. It adopts the axial backflow external mixing type, and through the unique design of the pump body and impeller flow channel, it does not need to install a bottom valve and a bottom valve like a general self-priming clean water pump. It can be used for irrigation and diversion, and it can also absorb and drain liquids containing large solid particles and long fiber impurities. It can be widely used in municipal sewage projects, river pond breeding, light industry, papermaking, textile, food, chemical industry, electrical industry, fiber, slurry and mixed suspension, etc. .

The global Self Priming Type Sewage Pump market size was estimated at USD 1850.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
