Abstracts

The self-propelled articulated boom lift is a type of aerial work equipment that can move by itself and features an articulated boom structure. It is typically equipped with a power drive system, control system, lifting mechanism, and an extendable and bendable working boom, capable of transporting operators and related tools and equipment to aerial work positions quickly, accurately, and safely. Due to the foldable working boom and compact overall structure, this equipment exhibits strong mobility and flexibility, allowing it to freely navigate and operate in various work sites. The product usually comes in three power modes: electric, diesel-driven, and hybrid.

Market Key Participants and Competitive Landscape Currently, the self-propelled articulated boom lift market is characterized by numerous domestic and international competitors. International brands such as Genie (USA), JLG (USA), Haulotte (France), and J.C. Bamford Excavators Ltd. (UK), leveraging their long-standing technical expertise and high reputation, continue to expand into emerging markets. Domestic enterprises, including leading aerial work platform manufacturers like Dingli Machinery (Zhejiang), XCMG (Jiangsu), and Zoomlion (Hunan), have seen rapid development in recent years. Through technological innovation and product upgrades, they have continuously enhanced their product competitiveness, gradually increasing their share in the domestic market and beginning to expand into international markets. Furthermore, numerous small and medium-sized enterprises have also entered the market competition. There is a notable trend of product homogenization in the market, with performance indicators such as working height, working range, and load-bearing capacity being relatively similar. Most enterprises offer products with different power sources, including electric, diesel, and hybrid options. Consequently, price competition is fairly intense.

Market Development Status Self-propelled articulated boom lifts are high-tech equipment, with technological research and development capability being one of the core competitiveness of enterprises. Meanwhile, the reliability and safety of aerial work platforms must be strictly

guaranteed. Against the backdrop of continuous urbanization, infrastructure construction and maintenance have increasingly demanded self-propelled articulated boom lifts, particularly in emerging economies. Furthermore, technological upgrades in manufacturing, efficiency improvements in the logistics industry, and intelligent development are driving the expansion of the self-propelled articulated boom lift market. **Future Trends** In the future, self-propelled articulated boom lifts will become increasingly intelligent, featuring more smart functions such as intelligent operation, remote monitoring, and automatic obstacle avoidance, thereby enhancing product operability and safety. Additionally, as environmental awareness continues to rise, enterprises will continuously develop and apply new energy-saving technologies and eco-friendly materials to reduce energy consumption and pollutant emissions, thereby improving the green performance of products, such as adopting clean energy electric drives.

The global Self-propelled Articulated Boom Lifts market size was estimated at USD 4861.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
