Abstracts

Self-propelled sweepers are industrial-grade cleaning machines designed for large-scale surface maintenance in both indoor and outdoor environments, utilizing an integrated propulsion system to eliminate manual pushing and enhance operational efficiency. These machines combine mechanical brooms, vacuum suction, and often dust filtration systems to collect debris ranging from fine dust to larger particles, and are commonly powered by electric batteries, propane, or diesel engines to accommodate varying operational demands and runtime requirements. They are distinguished from walk-behind or ride-on sweepers by their self-driven functionality, which reduces operator fatigue and allows for coverage of expansive areas such as warehouses, manufacturing plants, parking lots, and public spaces with consistent performance and improved productivity.

The global Self Propelled Sweepers market size was estimated at USD 2115.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
