Abstracts

A self-rescuer respirator is a compact, portable respiratory protection device designed for emergency use in environments where breathable air is compromised due to toxic gases, smoke, or oxygen deficiency, typically in industrial settings such as mining, chemical plants, or confined spaces; it functions by chemically converting carbon monoxide to carbon dioxide or by providing a short-duration supply of breathable air, enabling the wearer to escape hazardous conditions and reach safety. The market for self-rescuers is driven by stringent occupational safety regulations, increasing awareness of workplace hazards, and the growing emphasis on employee protection across high-risk industries, with demand concentrated among mining companies, industrial manufacturers, emergency response teams, and organizations operating in potentially hazardous environments where rapid evacuation may be necessary.
