Report Overview:

A personal fall limiter is essentially a compact, lightweight self-retracting lifeline that has a relatively short working length, typically six to nine feet. What makes the device “personal” is that the body of the retractable unit can be attached directly to the back D-ring on a worker’s full-body harness and can be carried on the worker’s back. This “reverse configuration” offers an advantage over many standard self-retracting lifelines, which must be secured at the anchor point.

The Global Self-Retracting Personal Fall Limiter (PFL) Market Size was estimated at USD 88.95 million in 2023 and is projected to reach USD 117.85 million by 2029, exhibiting a CAGR of 4.80% during the forecast period.
