Abstracts

Self-Service Bag Drop is an airport service system that allows passengers to complete baggage check-in by themselves, including equipment operation, baggage labeling, baggage weighing and security inspection, baggage delivery, etc. It reduces manual intervention through automated equipment (such as self-service check-in terminals, baggage weighing and label printing, and conveyor belt systems) to improve airport operation efficiency. Self-service baggage drop-in integrates barcode/RFID recognition, automatic sorting, computer vision, Internet of Things (IoT) and other technologies. Some high-end systems support face recognition or passport scanning to achieve contactless check-in. In the post-epidemic era, air passenger traffic has gradually recovered, passengers prefer self-service, and contactless demand has increased. At the same time, policy support from various governments, such as China's "smart airport" construction and the EU's "Digital Travel Initiative" promote the deployment of "self-service baggage drop-in". Globally, North America dominates the self-service baggage drop-in market, with the SBD penetration rate of US airports exceeding 40%, subsidized by the IRA Act. European countries are in a leading position in technology. Biometric SBD is widely adopted in countries such as Germany and the Netherlands, focusing on AI+biometrics (such as IDEMIA's fingerprint verification). The Asia-Pacific region is growing rapidly, reducing prices through localized production, and China and India are accelerating airport construction and developing rapidly. At present, the self-service baggage check-in market faces challenges such as high initial investment and technical adaptability. In the future, it will develop in the direction of full automation and robot loading.

The global Self-Service Bag Drop market size was estimated at USD 1031.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
