Abstracts

A self-settlement system refers to a digital platform or infrastructure that enables individuals, businesses, or organizations to manage and finalize their own financial transactions autonomously, without relying on intermediaries such as banks, payment processors, or clearinghouses for validation or execution. These systems typically leverage technologies like blockchain, smart contracts, or distributed ledger technology (DLT) to facilitate peer-to-peer (P2P) transfers, automate reconciliations, and ensure transparency, security, and immutability of transaction records. By allowing parties to directly settle obligations?whether involving currencies, assets, or data?self-settlement systems reduce dependency on traditional financial institutions, lower transaction costs, minimize processing times, and enhance user control over funds and contractual terms.

The global Self Settlement System market size was estimated at USD 1225.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
