Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Self-Tapping Cancellous Bone Locking Screw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The self-tapping cancellous bone locking screw is an orthopedic implant specifically designed for fixing cancellous bone (such as low-density bone areas like the distal femur, proximal tibia, and vertebral bodies). Its deep, wide-pitch threads enhance bone retention, and the locking thread at the head allows for angularly stable fixation with locking plates or intramedullary nails. The self-tapping tip allows for direct screwing into the bone without pre-tapping, improving surgical efficiency and reducing bone damage. The upstream of its supply chain includes medical-grade titanium alloys (such as Ti-6Al-4V ELI) or stainless steel bars, precision cold heading/machining equipment, and surface treatment service providers. The midstream consists of orthopedic companies with Class III medical device registration certificates, such as Weigao Orthopedics, DePuy Synthes, and Zimmer Biomet, which need to master material forming, heat treatment, cleaning and sterilization, and biocompatibility verification capabilities. The downstream primarily targets hospital trauma orthopedics and spinal surgery departments, entering clinical settings through distributors or centralized procurement channels. In 2024, the global production of self-tapping cancellous bone locking screws was approximately 4,941,176 units, with an average market price of approximately US\$85 per screw. Major manufacturers had gross margins of 50%?68% and a single production line capacity of 200,000 screws per year.

The global Self-Tapping Cancellous Bone Locking Screw market size was estimated at USD 450.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
