## Abstracts

Semi automatic motorcycles, also known as clutchless manual or semi auto transmission motorcycles, refer to two-wheelers that feature a manual gearbox without a manual clutch lever, allowing riders to change gears by foot without operating a clutch manually, thereby combining the control of manual shifting with the ease of automatic functionality for stop-and-go riding. These motorcycles typically employ systems such as centrifugal clutches, automated clutch mechanisms, or sensors that disengage the clutch during gear shifts, reducing rider workload in urban conditions while preserving fuel efficiency and a more engaged riding experience compared to fully automatic scooters or CVT-based models.

The global Semi Automatic Motorcycles market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
