Abstracts

The semi-automatic NDT (nondestructive testing) scanner market consists of portable or semi-stationary systems designed to perform inspections on materials and structures without causing damage, utilizing technologies such as ultrasonic testing (UT), eddy current testing (ET), or phased array ultrasonic testing (PAUT). These scanners are characterized by their ability to automate motion and data collection along predefined paths while still requiring operator setup, calibration, and supervision, bridging the gap between fully manual inspections and fully robotic systems. They are widely used across industries including aerospace, oil and gas, power generation, and manufacturing for applications such as weld inspection, corrosion mapping, and composite material evaluation, offering improved consistency, repeatability, and efficiency compared to purely manual methods while remaining more flexible and cost-effective than fully automated solutions.

The global Semi Automatic Ndt Scanner market size was estimated at USD 350.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
