Abstracts

The semi-automatic multi-story parking garage primarily includes two types of parking equipment: simple lifting and lifting with lateral movement. Simple lifting multi-story parking garages consist of vertical lifting and tilting types. The vertical lifting type typically has 2-3 levels. Its structure is simple and easy to operate, making it widely suitable for both indoor and outdoor parking lots. The cost is relatively low, with a two-level simple lifting system priced around 20,000 yuan, making it feasible for home use as well. Lifting with lateral movement multi-story parking garages are categorized based on their cross-sectional layout into fully above-ground and semi-underground types. The fully above-ground type can have 2-9 levels; however, the higher the number of levels, the longer it takes to access vehicles, so it is generally not recommended to build too high. The semi-underground type typically features one or two underground levels and one to three above-ground levels. The semi-underground design fully utilizes underground space, but it requires relatively higher civil construction investment.

The global Semi Automatic Parking System market size was estimated at USD 1847.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
