Abstracts

A semi-automatic resuscitator, also known as a bag-valve-mask (BVM) or manual resuscitator, is a medical device used to provide positive pressure ventilation to patients who are not breathing or have inadequate breathing. It is commonly used in emergency situations or during anesthesia. The semi-automatic resuscitator consists of a self-inflating bag attached to a face mask and a non-rebreathing valve. The bag is manually squeezed or compressed to deliver oxygen or a mixture of air and oxygen into the patient"s lungs. The non-rebreathing valve prevents the patient from inhaling exhaled air, ensuring that they receive fresh oxygen with each breath.The classification according to the material of Semi-automatic Resuscitator ?includes Self-inflating Resuscitator, Flow-inflating Resuscitator, and the proportion of Self-inflating Resuscitator is about 53%, Self-inflating resuscitator dominated the market owing to their usability in hospital emergency departments such as neonatal and delivery ward and the increasing number of self-inflating resuscitators being launched.North America is the largest sales place, with a sales market share nearly 28%. The demand for resuscitators in North America is expected to witness growth owing to the increasing cases of cardiac arrest and neonatal ventillation.

The global Semi-automatic Resuscitator market size was estimated at USD 643.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
