Abstracts

Semi-automatic tray sealers are packaging machines that use heat to apply a lidding film onto pre-formed trays, creating an airtight and tamper-evident seal while allowing for manual loading and unloading of trays, typically operated by a single person who places the filled tray into the machine, initiates the sealing cycle, and removes the sealed package once the process is complete. These machines are widely used in the food industry for packaging fresh produce, meats, ready meals, and dairy products, as well as in pharmaceuticals and other sectors where modified atmosphere packaging (MAP) or skin packaging is required to extend shelf life and maintain product integrity. The semi-automatic segment strikes a balance between cost efficiency and productivity, offering higher output than manual sealing methods while remaining more affordable and flexible than fully automated systems, making them particularly suitable for small to medium-sized enterprises, specialty producers, and operations with variable packaging needs or limited floor space. Key features often include adjustable sealing parameters, compatibility with various tray sizes and materials, user-friendly interfaces, and options for gas flushing to support MAP applications, catering to demands for food safety, presentation quality, and operational adaptability.

The global Semi Automatic Tray Sealers market size was estimated at USD 175.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
