Abstracts

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.

The global Semi Automatic Ultrasonic Welding Machine market size was estimated at USD 189.58 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
