## Abstracts

Semi Automatic Wire Bonders is a lead bonding device that combines manual operation with partially automated functions and is mainly used in semiconductor research and development, laboratory or low-volume production scenarios. Its core function is to realize the high-precision electrical interconnection of metal leads (such as gold, aluminum, etc.) or metal bands between the chip and the substrate through wedge welding technology. The device is typically equipped with a touch screen control system, programmable parameters, and motor driven axial motion, supports features such as deep cavity bonding, electronic wire clip control, program storage), and can handle a wire diameter range of 17-500 $\mu$ m, and is compatible with process requirements such as copper wire bonding and tension testing. Compared with fully automatic equipment, it is less automated but more flexible, suitable for process development and small-scale trial production.
