## Abstracts

A semi-autonomous bus is a public transportation vehicle that combines automated driving technology with human supervision. These buses are equipped with various sensors and systems that allow them to operate with limited human intervention. However, a human driver or operator is present on board to monitor the vehicle's performance, handle complex traffic situations, and take control if needed. A fully autonomous bus, on the other hand, is a self-driving vehicle that operates without human intervention. These buses are equipped with advanced sensors, artificial intelligence, and communication systems that enable them to navigate, make decisions, and interact with the environment without a human driver on board.

The global Semi-Autonomous and Fully Autonomous Bus market size was estimated at USD 933.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.90% during the forecast period.
