Report Overview

Semi-conductive buffer water-blocking tape is a specialized component used in the construction of telecommunications and power cables. It serves a dual purpose in cable design: first, as a semi-conductive layer, it helps to evenly distribute electrical stress within the cable, preventing electrical breakdown. Second, it acts as a water-blocking material, ensuring that moisture or water does not infiltrate the cable core. This tape typically contains conductive particles or materials that enable it to maintain a semi-conductive property while also having water-blocking capabilities. By combining these functions, it contributes to the overall reliability and longevity of cables, particularly in outdoor and challenging environments.
